

# MANZI'S MATHS

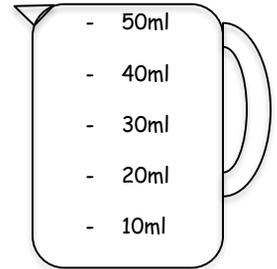

## CAPACITY AND VOLUME

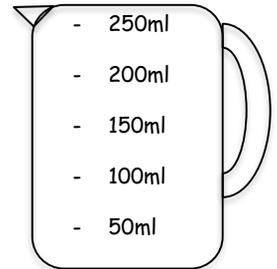

Manzi is doing different activities to see how much water is wasted or saved with each activity. Help him by colouring in the measuring jugs to the right amount of water that has been wasted or saved.

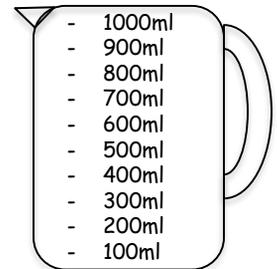

Manzi placed a measuring jug under a dripping tap. After letting the tap drip for 5 minutes he went to see how much water could have been saved if the dripping tap was closed. He found **40ml** of water in the jug.

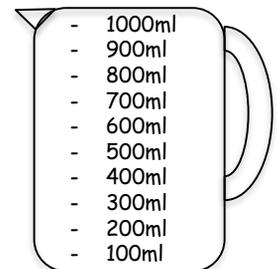

Manzi was thirsty and used a cup to drink water. He didn't drink all the water and some was left in the cup. He poured the rest of the water into a measuring jug to see how much water he might have wasted if he just poured the rest down the drain. He still had **100ml** of water left which he used to water a plant.

Manzi took a short shower with a bucket next to him to catch any extra water. When he was finished he poured the water from the bucket into the measuring jug to see how much water he collected. He saved **1000ml** of water which he used to add to the toilet cistern to flush the toilet.

Manzi planted some healthy vegetables. The plants were still small so he used a watering can to give the vegetables only the amount of water that they needed. There was some water left in the watering can so he measured what was left. There was **200ml** of water left which he decided to put back in the watering can to water his vegetables on another day.

Manzi is careful not to waste a drop of water as he knows that we all need water to survive. Manzi loves, cares and respects water.
